

Privileged user access challenge

The access to systems, databases, servers and applications through privilege user accounts as well as the password management of these key user accounts is emerging as the most important challenge in today's IT environment, where flexibility in access with quick resolution of issues is of utmost importance to business.

“ Compliance made easy ”

Our solution

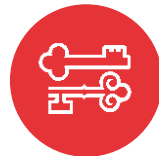

ARCON provides a security blanket that sits on top of all Operating Systems & Databases. All IT Administrators like Sysadmins, Database Administrators as well as Application Administrators are allowed to login to their authorized systems only by using a unique ID and Password and One Time Password (OTP) provided to them. Once logged in, view/modify access is provided on “need to know” and need to do” basis. Further, activities carried out are recorded and complete audit trails are maintained. The solution provides a secure umbrella around data stored in various systems.

Key Features

Single sign-on

There are multiple ways to connect to any underlying technology system viz: OS, Databases, Networking devices, Security solutions etc. These ready connectors help administrators to connect to any allowed components without having to remember individual user-id and passwords.

Dual Factor

The Solution ARCON provides single click access to multiple technologies, however since the access is for privilege user-ids it is imperative that a dual factor authentication is used to protect from unauthorized access. ARCON comes with inbuilt dual factor authentication ARCON OTP. ARCON OTP is a mobile based app which works on all mobile devices.

Password Vault

ARCON provides a password vault which generates strong and dynamic passwords and the engine can automatically change passwords for several devices systems at one go. The passwords are then stored in highly secured electronic vault.

Granular Access Control

ARCON has a unique technology framework which helps in providing granular access control for privilege users. The access control feature helps organizations protect their systems from unauthorized access and unintentional errors if any.

S.M.A.R.T. Audit Trails

ARCON provides comprehensive audit trails and session recordings to ensure that all activities are tracked and these logs are encrypted and separately stored creating a legal hold.

One Admin Control

Single console for all administrative tasks.

Virtual Grouping

ARCON management console support virtual grouping of users and resources thus providing a flexible architecture to allow management of multiple departments or multiple subsidiaries.

Live Dashboard

ARCON core engine Live Dashboard for real-time view of activities across IT Infrastructure. It also provides complete view of all activities performed by the super users and administrators.
